The present work investigates the potential of Lantana camara, a forest waste, as an adsorbent for the phenol reduction in wastewater. Batch studies were conducted with adsorbent treated with HCl and KOH to determine the influence of various experimental parameters such as pH, contact time, adsorbent dosage, and phenol concentration. Chitosan, the deacetylated form of chitin, is a polymer composed of glucosamine residues linked by β-1, 4 glycosidic bonds. Chitin is usually obtained from waste materials of the seafood processing industry, mainly crab, shrimp, prawn, and krill shells (Jayakumar et al., 2010). assuming an adsorbate behaves as an ideal thing at isothermal conditions. At these conditions the adsorbate's partial pressure, p, is related to the volume of it, V, adsorbed onto a solid adsorbent. The adsorbent, as indicated in the figure, is assumed to be an ideal solid surface composed of series of distinct sites capable of binding the ... Thu, 06 Dec 2018 00:24:00 GMT Langmuir adsorption model - Wikipedia - In a chemical reaction, chemical equilibrium is the state in which both reactants and products are present in concentrations which have no further tendency to change with time, so that there is no observable change in the properties of the system. Usually, this state results when the forward reaction proceeds at the same rate as the reverse reaction. ... Mon, 03 Dec 2018 06:25:00 GMT A review on the utilization of fly ash - ScienceDirect - Abstract. The adsorption isotherms of CO<sub>2</sub>, CO, N<sub>2</sub>, CH<sub>4</sub>, Ar, and H<sub>2</sub> on activated carbon and zeolite LiX were measured using a volumetric method. Equilibrium experiments were conducted at 293, 308, and 323 K and pressures up to 1.0 MPa. The adsorption isotherm and heat of adsorption were analyzed for two pressure regions of experimental data: pressures up to 0.1 MPa and up to 1.0 MPa.
