Journal of JNCA. Fri, 11 Jan 2019 15:54:00 GMT
Journal of Nonlinear and Convex Analysis - Yokohama Publishers - In linear algebra, the Perron-Frobenius theorem, proved by Oskar Perron () and Georg Frobenius (), asserts that a real square matrix with positive entries has a unique largest real eigenvalue and that the corresponding eigenvector can be chosen to have strictly positive components, and also asserts a similar statement for certain classes of nonnegative matrices.
Fri, 11 Jan 2019 18:25:00 GMT
Perron-Frobenius theorem - Wikipedia - This note is intended for students who have a background in multivariable calculus and some experience in proof-based mathematics. Topics covered includes: Euclidean geometry, Polygons, Triangulations and Tilings, The Chord Theorem, Tangrams and Scissors Congruence, Spherical Geometry, Hyperbolic geometry, Euclid's axioms and the parallel postulate, Incidence geometry and Hyperbolic isometries.

Resolve a DOI Name - One notable variant of a Markov random field is a conditional random field, in which each random variable may also be conditioned upon a set of global observations. In this model, each function is a mapping from all assignments to both the clique k and the observations to the nonnegative real numbers. This form of the Markov network may be more appropriate for producing discriminative ...
