GMT Vector Analysis, 2nd Edition: Murray Spiegel, Seymour ... - In multilinear algebra, a tensor contraction is an operation on a tensor that arises from the natural pairing of a finite-dimensional vector space and its dual. In components, it is expressed as a sum of products of scalar components of the tensor(s) caused by applying the summation convention to a pair of dummy indices that are bound to each other in an expression. Tensor contraction - Wikipedia - Definition. Let V be a vector space and \hat{A} a tensor of order k . Then T is a symmetric tensor if = for the braiding maps associated to every permutation \checkmark on the symbols $\{1,2,\dots,k\}$ (or equivalently for every transposition on these symbols).. Given a basis $\{e_i\}$ of V , any symmetric tensor T of rank k can be written as $= \hat{A}^i_1 \hat{A}^i_2 \dots \hat{A}^i_k = \hat{A}^i_1 \hat{A}^i_2 \dots \hat{A}^i_k$ for some unique list of coefficients ...
